

Description

The AP5056 is a complete constant current & constant voltage linear charger for single cell lithium-ion batteries. Its SOP package and low external component count make the AP5056 ideally suited for portable applications. Furthermore, the AP5056 is specifically designed to work within USB power specifications.

No external sense resistor is needed, and no blocking diode is required due to the internal MOSFET architecture. Thermal feedback regulates the charge current to limit the die temperature during high power operation or high ambient temperature. The charge voltage is fixed at 4.2V, and the charge current can be programmed externally with a single resistor. The AP5056 automatically terminates the charge cycle when the charge current drops to $1/10^{\text{th}}$ the programmed value after the final float voltage is reached.

When the input supply (wall adapter or USB supply) is removed, the AP5056 automatically enters a low current state, dropping the battery drain current to less than 2uA. The AP5056 can be put into shutdown mode, reducing the supply current to 50uA.

Other features include Battery temperature monitor, under-voltage lockout, automatic recharge and two status pins to indicate charge and charge termination.

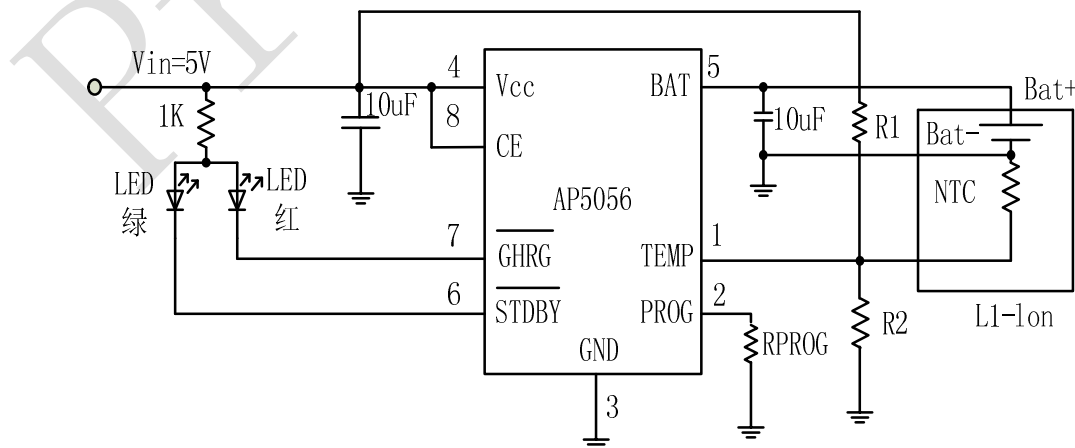

Applications

- Cellular Telephones, PDAs, MP3 /MP4 Players
- Charging Docks and Cradles
- Bluetooth 、GPS Applications

Features

- Programmable Charge Current Up to 1000mA

Typical Application Circuit

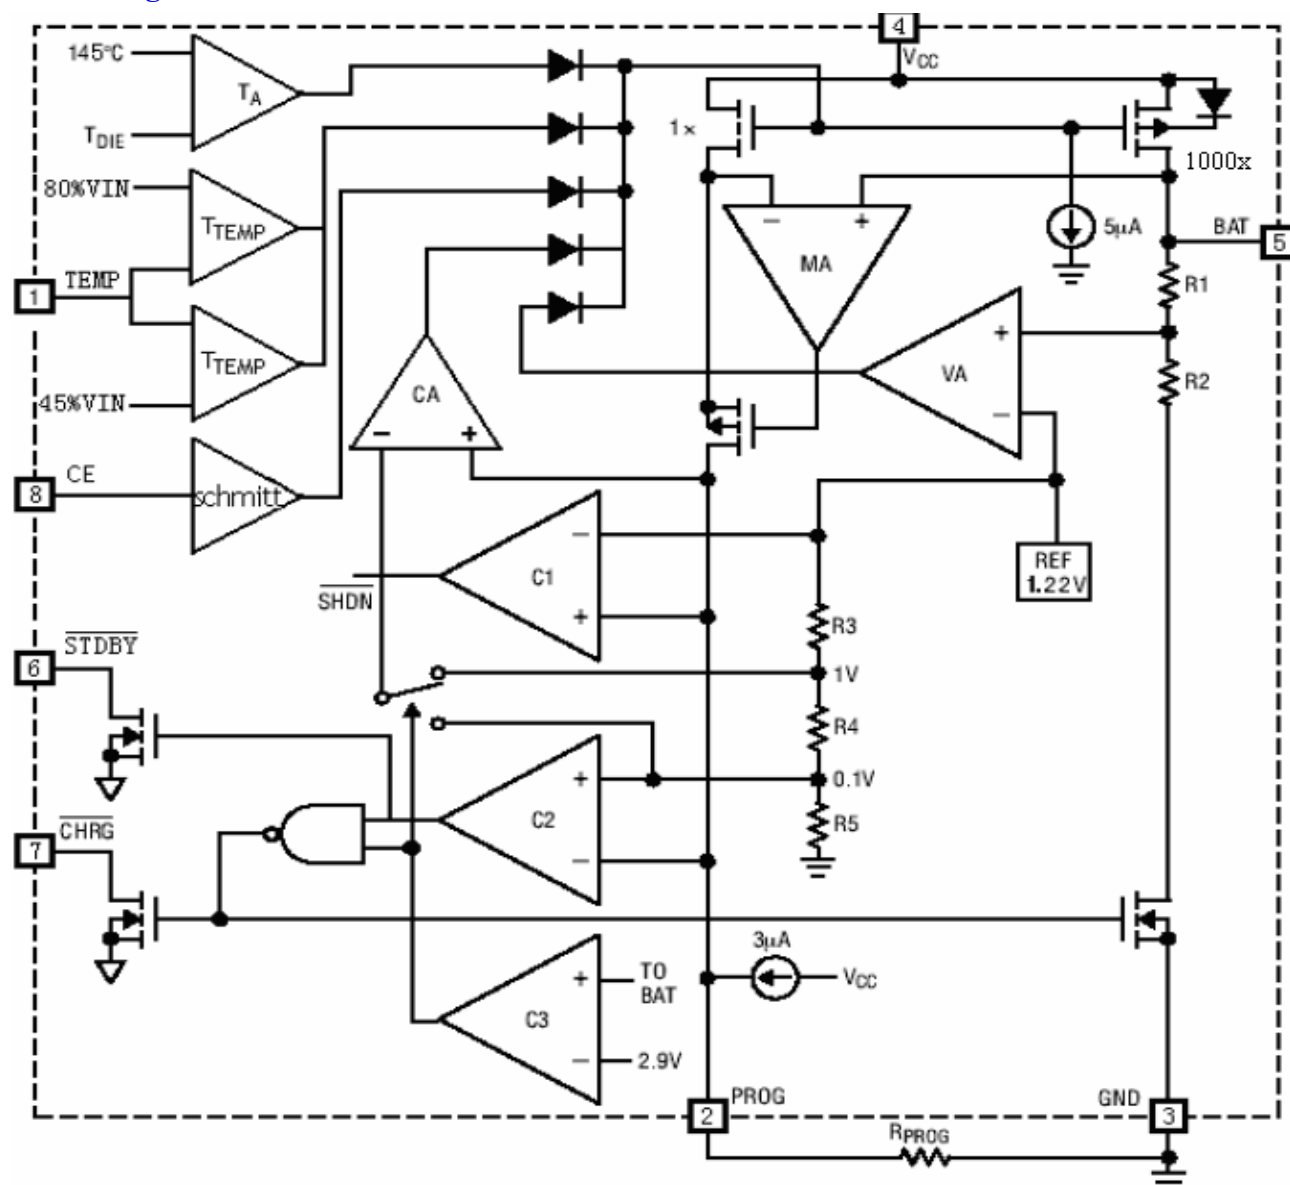

- No MOSFET, Sense Resistor or Blocking Diode Required
- Complete Linear Charger in SOP Package for single Cell Lithium-Ion Batteries
- Constant-Current/Constant-Voltage Operation with Thermal Regulation to Maximize Charge Rate Without Risk of Overheating
- Charges Single Cell Li-Ion Batteries Directly from USB Port
- Preset 4.2V Charge Voltage with $\pm 1\%$ Accuracy
- Charge Current Monitor Output for Gas Gauging
- Automatic Recharge
- Charge state pairs of output, no battery and fault status display
- C/10 Charge Termination
- 50uA Supply Current in Shutdown
- 2.9V Trickle Charge Threshold
- Soft-Start Limits Inrush Current
- Battery temperature monitoring function
- Available in SOP8-PP Package

Package

- SOP8-PP

Block Diagram

Absolute Maximum Ratings

PARAMETER	SYMBOL	MAXIMUM RATING	UNIT
Input Supply Voltage	V _{cc}	V _{SS} -0.3~V _{SS} +7	V
PROG pin Voltage	V _{prog}	V _{SS} -0.3~V _{cc} +0.3	
BAT pin Voltage	V _{bat}	V _{SS} -0.3~7	
CHAG pin Voltage	V _{chrg}	V _{SS} -0.3~V _{SS} +7	
BAT pin Current	I _{bat}	1400	mA
PROG pin Current	I _{prog}	1400	uA
Operating Ambient Temperature	T _{opa}	-40~+85	°C
Storage Temperature	T _{str}	-65~+125	

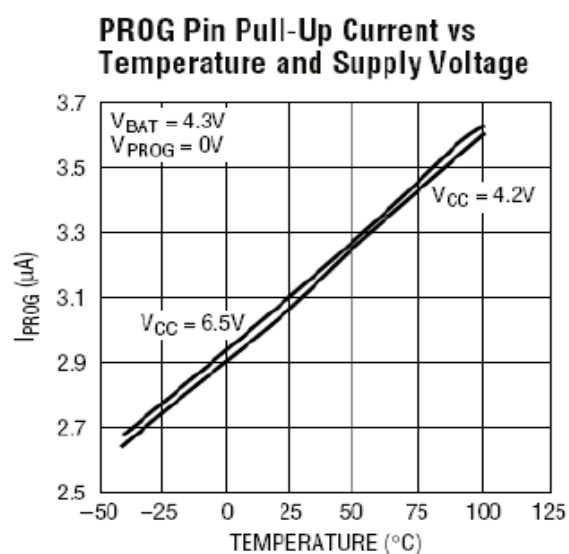

Caution: The absolute maximum ratings are rated values exceeding which the product could suffer physical damage. These values must therefore not be exceeded under any conditions.

Electrical Characteristics

Parameter	Symbol	CONDITION	MIN	TYP	MAX	UNIT
Input supply voltage	Vcc		4.25		6.5	V
Input supply current	Icc	Charge mode, R _{PROG} =10K		350	2000	uA
		Standby mode		150	500	uA
		Shutdown mode(R _{PROG} not connected,Vcc<Vbat or Vcc<Vuv)		50	100	uA
Regulated Output Voltage	Vfloat	0°C ≤ T _A ≤ 85°C, I _{BAT} = 40mA	4.158	4.2	4.242	V
BAT pin Current	Ibat	R _{PROG} =2k,Current mode	465	500	535	mA
		R _{PROG} =1k,Current mode	934	1000	1070	mA
		Standby mode,Vbat=4.2V	0	-2.5	-6	uA
		Shutdown mode		1	2	uA
		Sleep mode,Vcc=0V		0.3	2	uA
Trickle charge current	Itrikl	Vbat<Vtrikl,Rprog=1k	93	100	107	mA
Trickle charge Threshold Voltage	Vtrikl	R _{PROG} =10K, Vbat Rising	2.8	2.9	3.0	V
Trickle voltage hysteresis voltage	Vtrhys	R _{PROG} =1k	60	80	110	mV
Vcc Undervoltage lockout Threshold	Vuv	From Vcc low to high	3.7	3.8	3.93	V
Vcc undervoltage lockout hysteresis	Vuvhys		150	200	300	mV
Vcc-Vbat Lockout Threshold voltage	Vasd	Vcc from low to high	50	100	140	mV
		Vcc from high to low	5	40	50	mV
C/10 Termination Current Threshold	Iterm	R _{PROG} =1k	0.085	0.1	0.115	mA/mA
		R _{PROG} =2k	0.085	0.1	0.115	mA/mA
PROG pin Voltage	Vprog	R _{PROG} =1k, Current mode	0.93	1.0	1.07	V
CHRG pin Output low voltage	Vchrg	Ichrg=5mA		0.35	0.6	V
STDBY pin Output low voltage	Vstdby	Istdby=5mA		0.35	0.6	V
Recharge Battery threshold Voltage	ΔVrecg	V _{FLOAT} - V _{RECHRG}		100	200	mV
CE high voltage	Vce-h		1.2			V
CE low voltage	Vce-l		.		0.6	V
TEMP pin voltage of the high-end flip	Vtemp-h			80	82	%Vcc
TEMP pin voltage of the low-end flip	Vtemp-l		43	45		%Vcc
Limited temperature patterns in the junction temperature	Tlim			145		°C

Typical Performance Characteristics

Ordering Information

Part Number	Top Mark	Package
AP5056	5056 XXYY	SOP8-PP

Pin Configuration

Pin Assignment

Pin Number	Pin Name
1	TEMP
2	PROG
3	GND
4	VCC
5	BAT
6	STDBY
7	CHRG
8	CE

Pin Function

TEMP (Pin 1): Battery temperature detection input. TEMP pin to receive the battery NTC sensor output. If the TEMP pin voltage is less than the input voltage is greater than 45% or 80% of the input voltage means the battery temperature is too low or too high, then the charge has been suspended.

If the TEMP direct access GND, battery temperature detection canceled, the other charged and functioning properly.

PROG (Pin 2): Charge Current Program, Charge Current Monitor and Shutdown Pin. The charge current is programmed by connecting a 1% resistor, R_{PROG} , to ground. When charging in constant-current mode, this pin serves to 1V. In all modes, the voltage on this pin can be used to measure the charge current using the following formula:

$$I_{BAT} = (V_{PROG}/R_{PROG}) \cdot 1000$$

The P_{ROG} pin can also be used to shut down the charger. Disconnecting the program resistor from ground allows a 3uA current to pull the P_{ROG} pin high. When it reaches the 1.21V shutdown threshold voltage, the charger enters shutdown mode, charging stops and the input supply current drops to 50uA. This pin is also clamped to approximately 2.4V. Driving this pin to voltages beyond the clamp voltage will draw currents as high as 1.5mA. Reconnecting R_{PROG} to ground will return the charger to normal operation.

GND (Pin 3): Ground.

VCC (Pin 4): Positive Input Supply Voltage. Provides power to the charger, VCC can range from 4.25V to 6.5V and should be bypassed with at least a 10uF capacitor. When VCC drops to within 30mV of the BAT pin voltage, the AP5056 enters shutdown mode, dropping I_{BAT} to less than 2uA.

BAT (Pin 5): Charge Current Output. Provides charge current to the battery and regulates the final float voltage to 4.2V. An internal precision resistor divider from this pin sets the float voltage which is disconnected in shutdown mode.

STDBY (Pin 6): The completion of battery charging instructions side. When the battery charge is complete, STDBY pulled low by internal switches, indicating the completion of charging. In addition, STDBY pin will be in a high-impedance state.

CHRG (Pin 7): Open-Drain Charge Status Output. When the battery is charging, the CHRG pin is pulled low by an internal N-channel MOSFET. When the charge cycle is completed, a weak pull-down of approximately 20uA is connected to the CHRG pin, indicating an "AC present" condition. When the AP5056 detects an under voltage lockout condition, CHRG is forced high impedance.

CE (Pin 8): Chip enable input. High input level would AP5056 is in normal working condition; low input level so that AP5056 is prohibited charging status. CE pin can be TTL or CMOS level-level driver.

SOP8-PP

SOP8 (EXPOSED PAD)

NOTE:

- 1) Control dimension is in inches. Dimension in bracket is millimeters.
- 2) Exposed Pad Option Only (N-Package) ; 2.55+/- 0.25mm x 3.38 +/- 0.44mm.
Recommended Solder Board Area: 2.80mm x 3.82mm = 10.7mm² (16.6mil²)
