

# Li-ion Battery Multi Serial Cell Protection IC

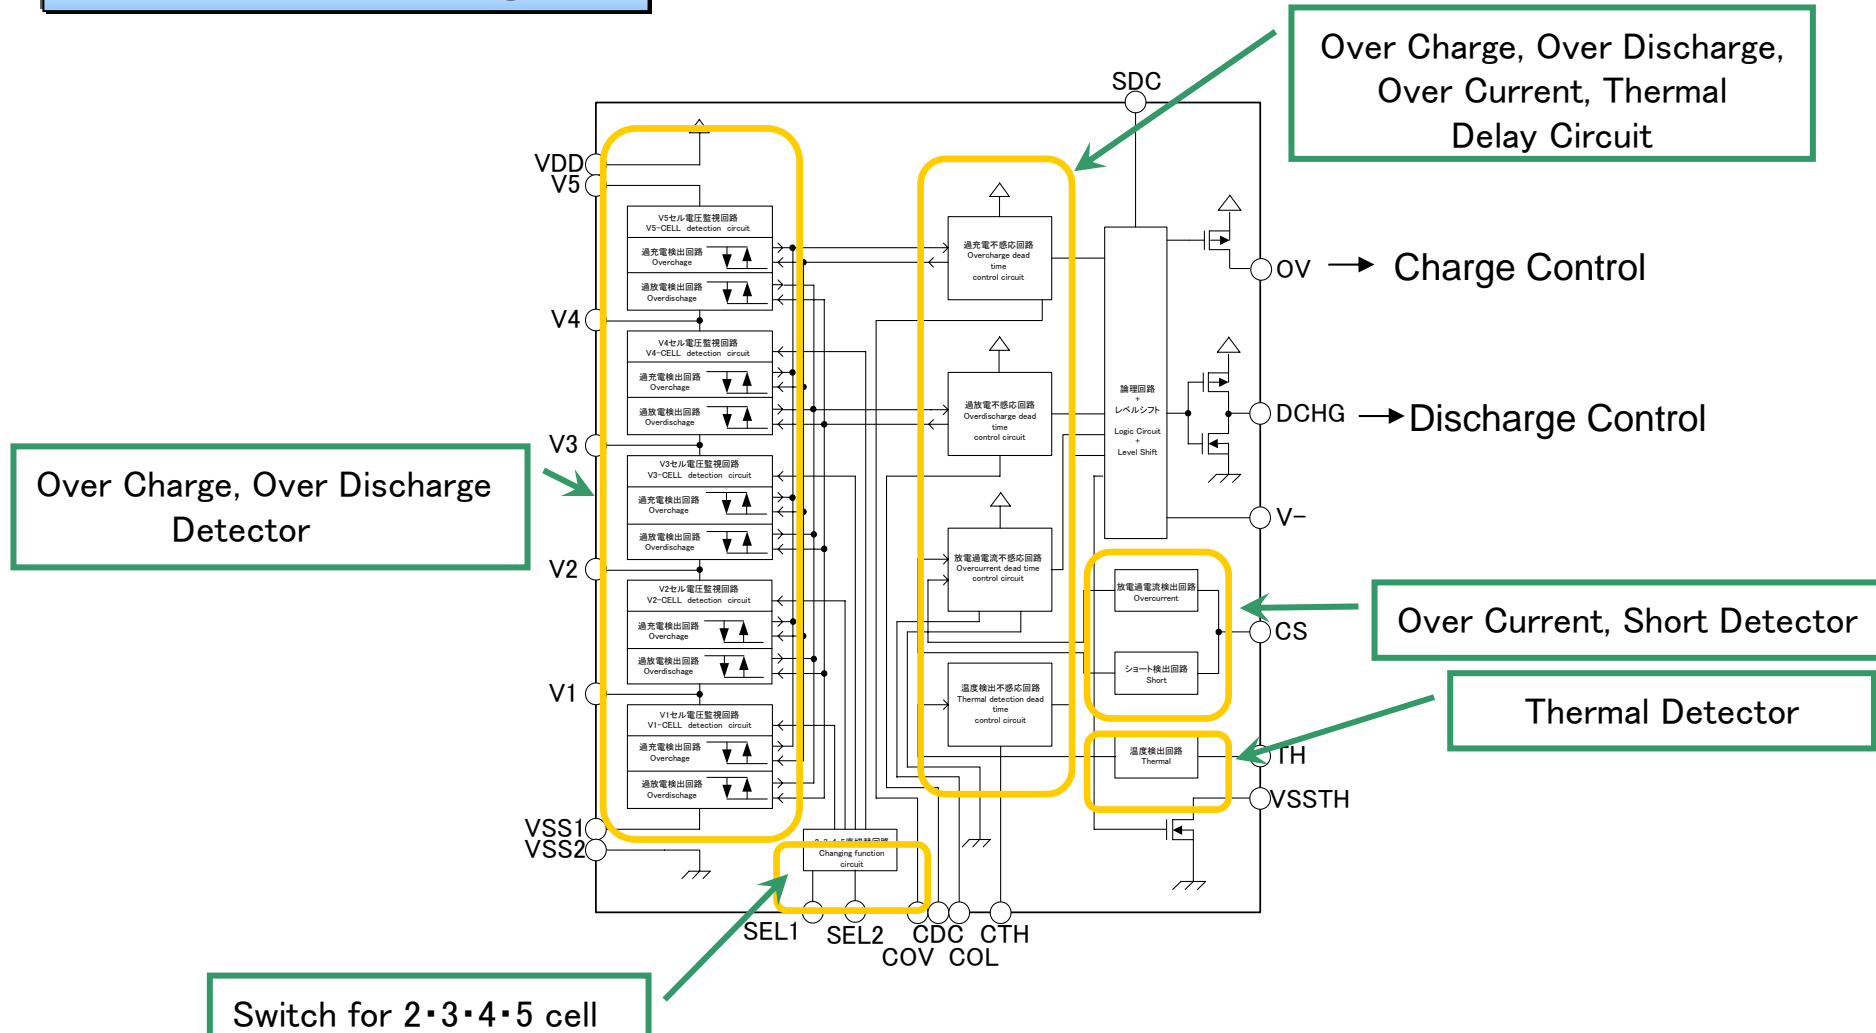

# Battery Protection IC Roadmap

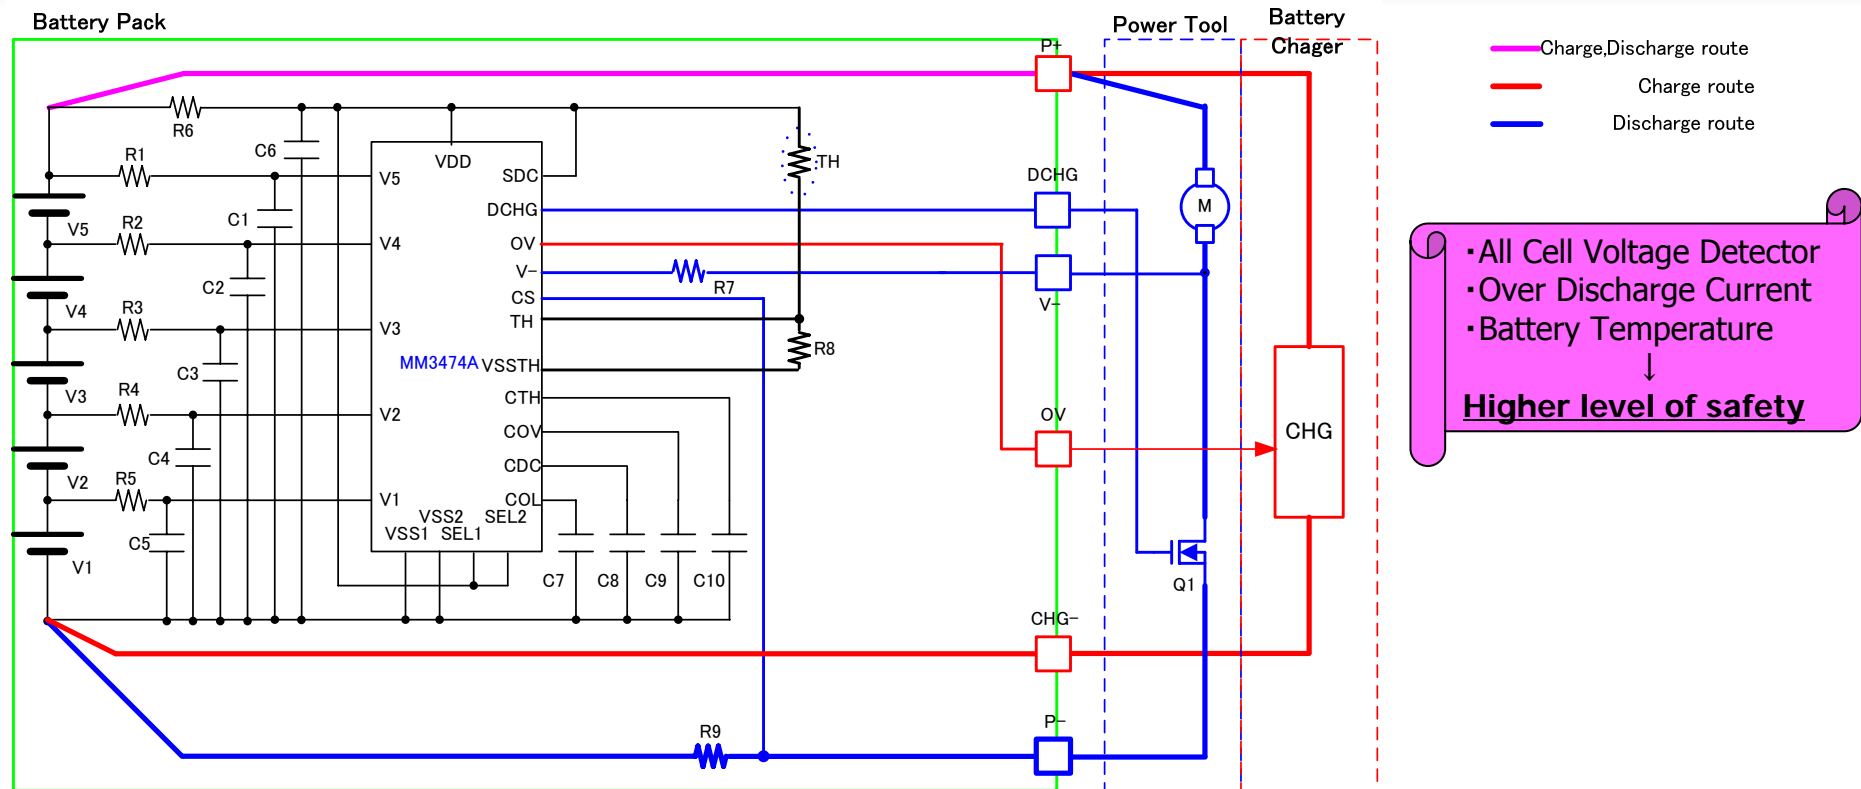

# Li-ion Battery 2~5 Cell Protection IC

# 2~5 Cell Battery Protection IC MM3474 (Under Developing)

## MM3474 Block Diagram

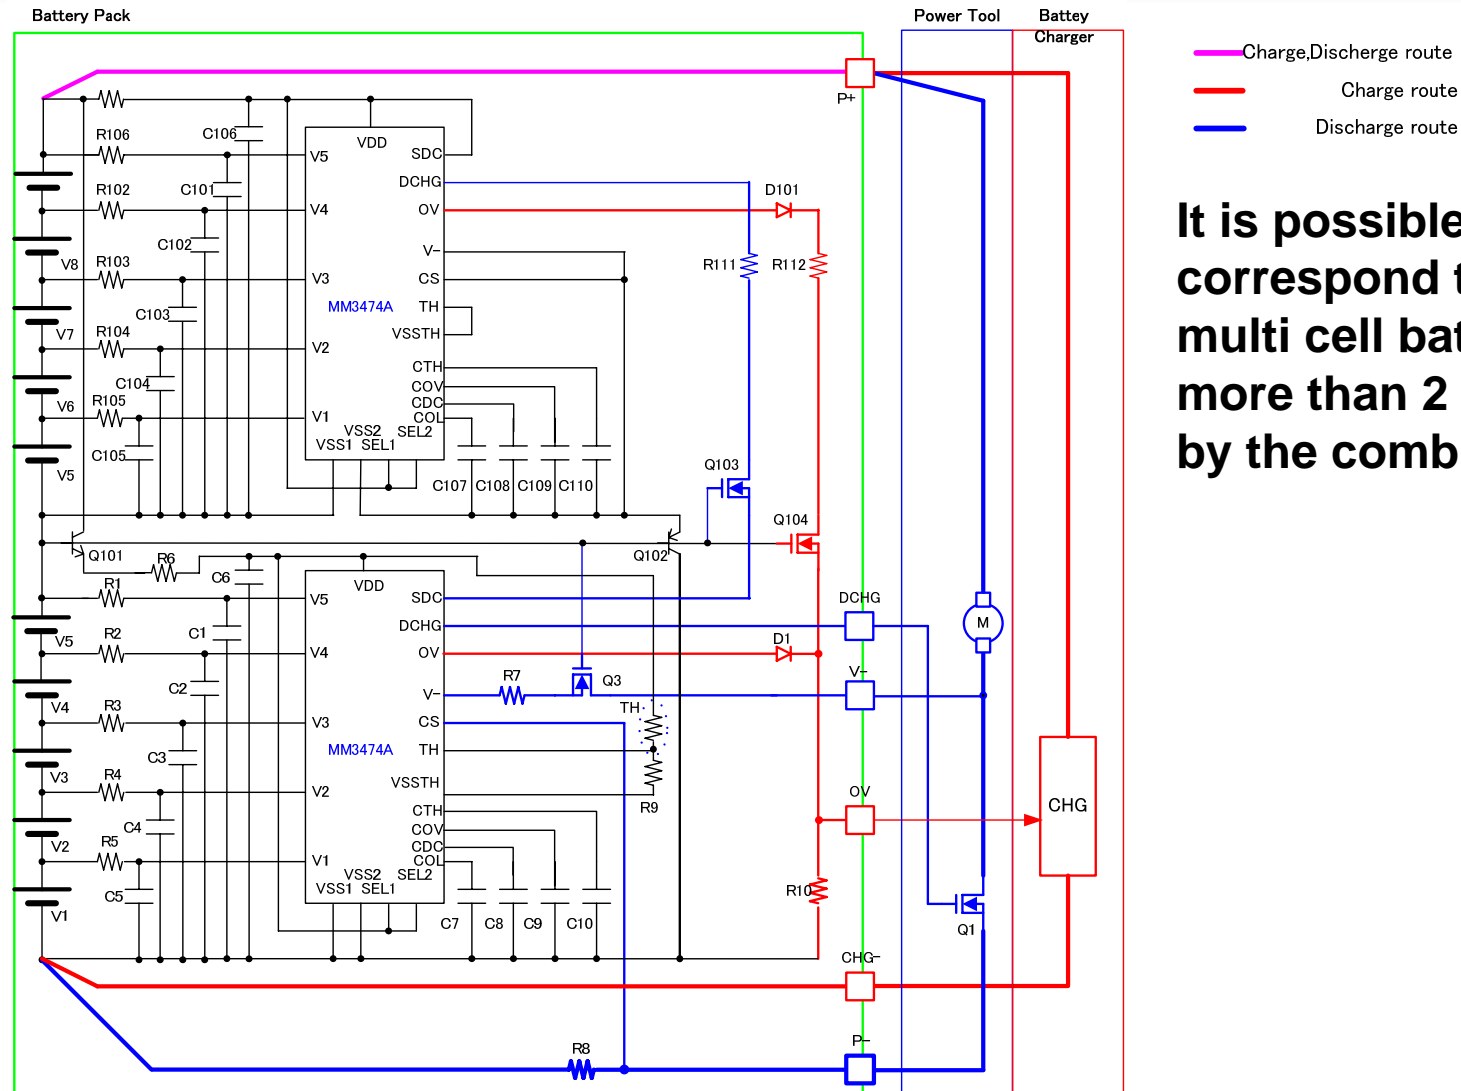

# 5-cell Application for Electrical Power Tools

**Battery Protection Functions**  
Over Charge  
Over Discharge  
Over Discharge Current  
Thermal Protect  
(Forbid Charge, Discharge)

**Battery Pack (6 Terminal)**  
P+ : Battery + terminal  
DCHG : Over Discharge, Over Current  
Detection Output  
V- : Load Detect Terminal for Over Current  
OV : Over Charge Detection Output  
CHG- : For Charger  
P- : Battery - Terminal

# 10-cell Application for Electrical Power Tools

**It is possible to correspond to the multi cell battery more than 2 cells by the combination.**

# Multi-cell Battery Protection IC: MM3474

Model Name		SII	MITUMI	
		S8204	MM3474	
		B	A	H
Overcharge Detection Accuracy		±25mV	±25mV	±25mV
Overdischarge Detection Accuracy		±50mV	±100mV	±100mV
Overcurrent detection voltage range	Detection voltage 1	0.05~0.3V	0.05~0.3V	0.15V
	Detection voltage 2	0.5V	0.5V	–
	Detection voltage 3	1.0V	1.0V	1.0V
Overcurrent detection method		GND side Detection resistance voltage	GND side Detection resistance voltage	GND side Detection resistance voltage
Overcharge release delay time		External C	External C	External C
Overdischarge release delay time		External C	External C	External C
Discharge overcurrent release delay time		External C	External C	External C Detection and release are separated.
Temperature detection function		–	✓	–
External charge/discharge control pin	Discharge	✓	✓	✓
	Charge	✓	– *Note 1	–
Package		TSSOP-16	VSOP-20	VSOP-20
Maximum rating		24V	30V	30V
Supply current (MAX)		33 μA	28 μA	28 μA
Standby mode (MAX)		0.1 μA	3.0 μA *Note 2	3.0 μA *Note 2

\*Note 1: A temperature detecting pin can be used as a substitute.

\*Note 2: Charger connection release with 0.1uA standby current is also acceptable.

# Electrical Power Tools Market

2008 Electrical Power Tools World Wide Market Share

2008 Electric Power Tool Battery Composition Ratio

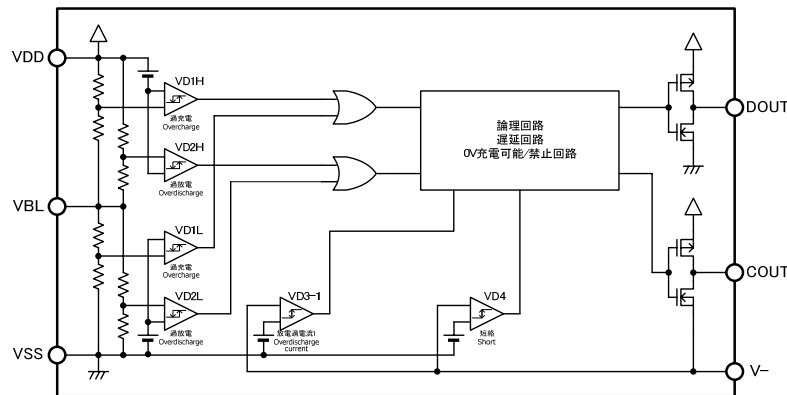

December 2008 IT総研

- ☐ It is expected that protection ICs for monitoring all cells designed for electrical power tools will grow in demand since electrical power tools must have battery packs with a protection function from 2010 in the Japanese domestic market.
- ☐ Lithium batteries (cells) are expected to surpass NiCd batteries in 2010.

# Li-ion Battery 2-cell Protection IC + Voltage Monitor IC

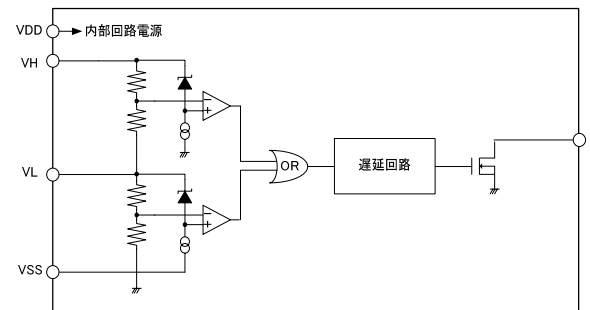

# 2-cell Protection IC + Voltage Monitor IC (Double Protection)

## 2-cell Battery Protection IC (MM3220)

COB modularization enables battery protection modules to be downsized and have a superior level of safety.

## Voltage Monitor IC (MM3480)

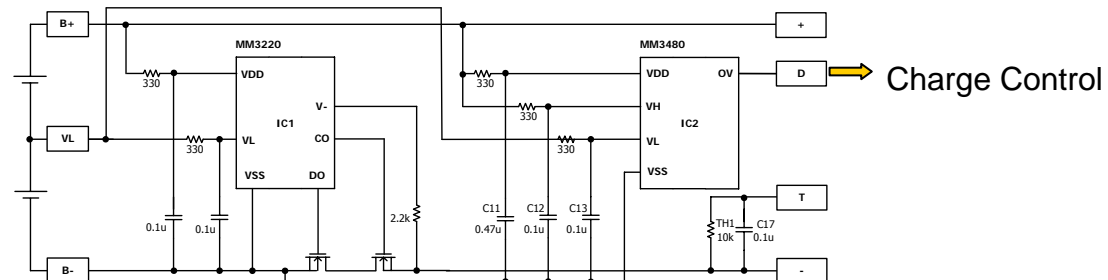

◇ Protected operation (Example)  
Battery voltage increases.

MM3480 detects overcharge and notifies the charger of the abnormality.

Voltage increases even further due to defect in the charger.

MM3220 detects overcharge and prohibits charging.

## Application

## ◇ Features

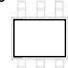

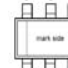

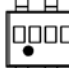

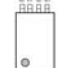

**MM3220 (2-cell protection IC)**

- Overdischarge/overcharge/overcurrent detection
- Detection accuracy:  $\pm 25\text{mV}$
- Shutdown in overdischarge mode  
0.1uA (Normal: 4uA)

## MM3480 (Voltage monitor)

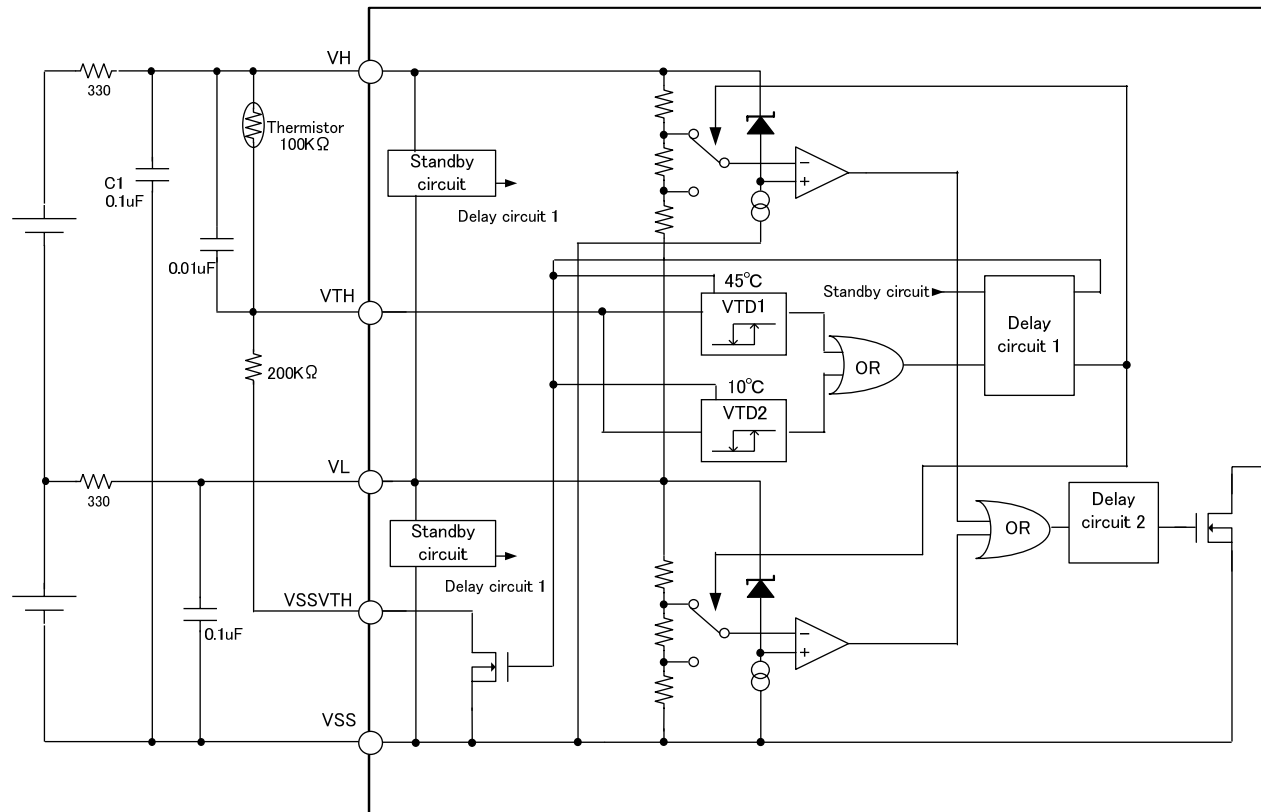

- Overcharge detection
- Detection delay: 10ms
- Shutdown in overdischarge mode  
0.1uA (Normal: 3uA)

# Battery Monitor (Under Developing)

**ES '10.1**

## ◇MM3481

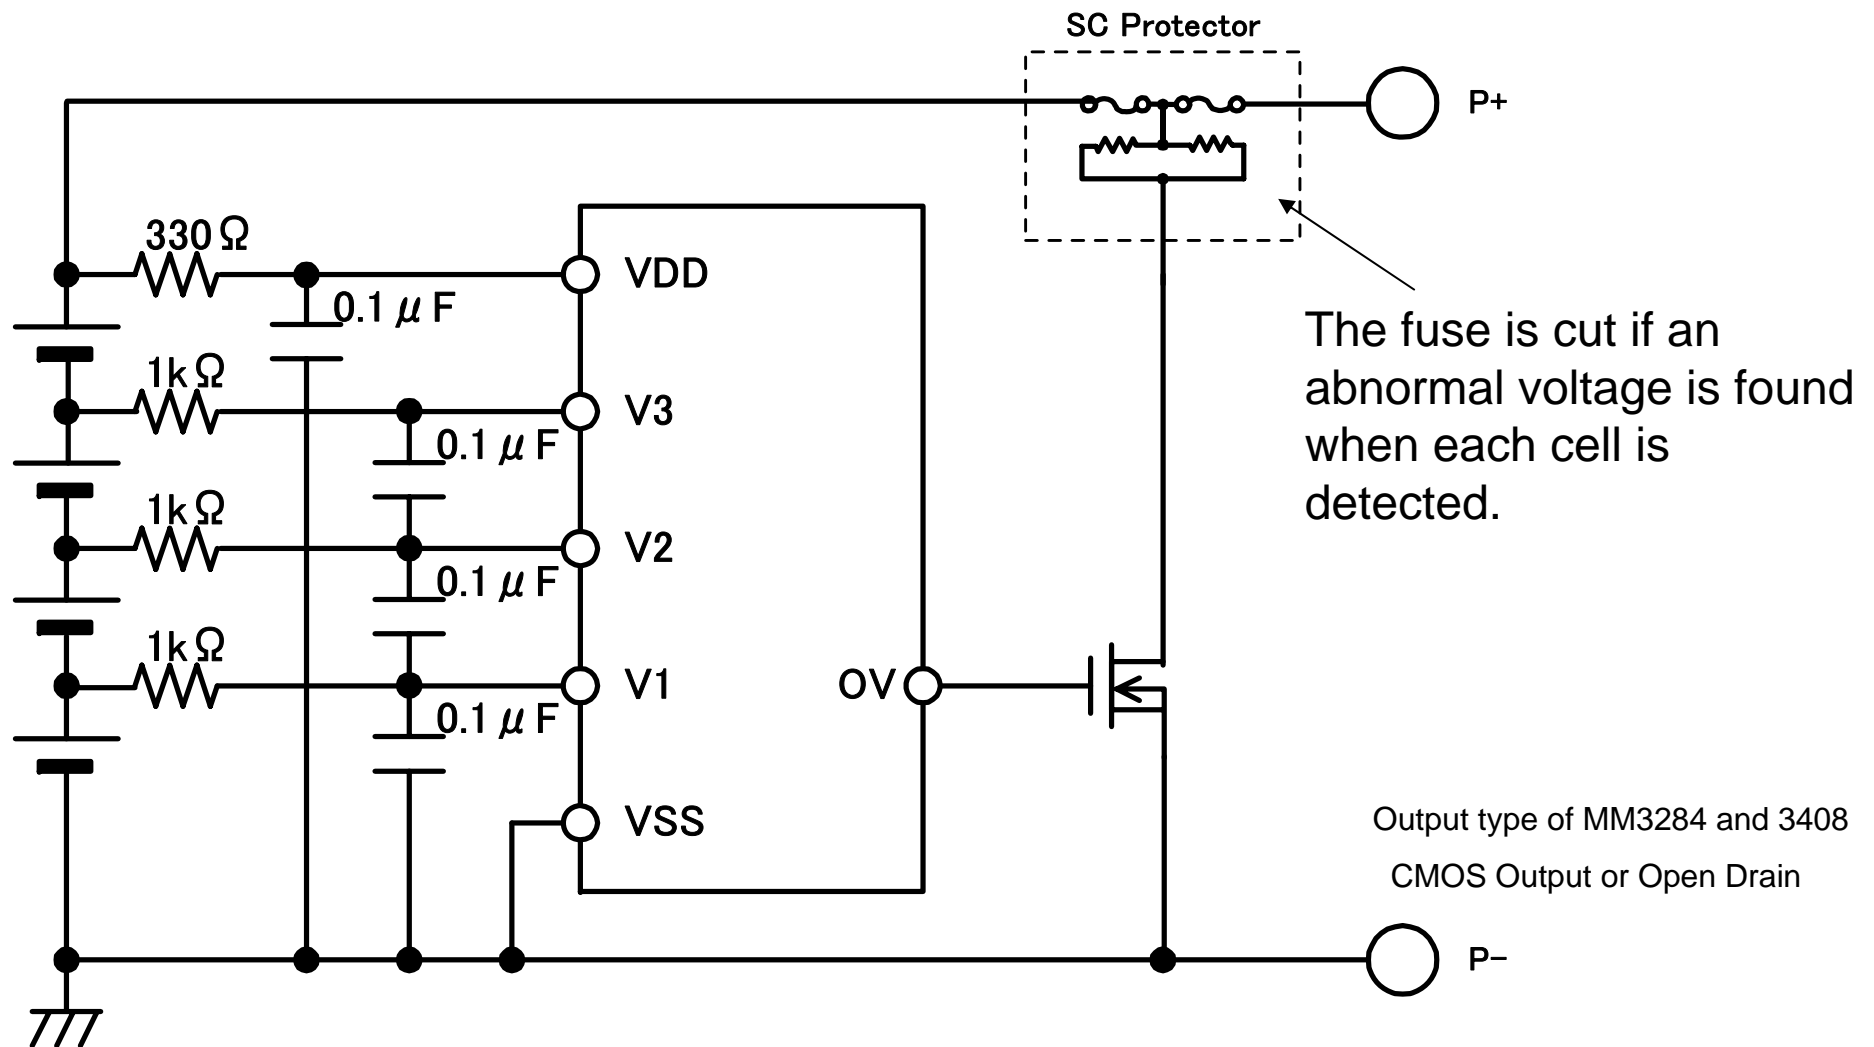

- Temp detect by the thermistor (3-level Over Charge Detection)
- The thermistor Current Reducer (ON: 200ms/OFF: 20s)
- Shutdown for Over Discharge
- Quiescent Current 0.1μA(V<sub>dd</sub>=2.3V) (Active: 5μA)
- Voltage Detect Precision ±25mV (0~60°C)
