R1514x SERIES

150mA VOLTAGE REGULATOR (Wide Input Voltage Range)

NO.EA-152-070802

OUTLINE

The R1514x series are CMOS-based positive voltage regulator (VR) ICs featuring 150mA output current. The R1514xxxxB has features of high input voltage and ultra-low supply current. A peak current limit circuit, a short current limit circuit, and a thermal shutdown circuit are built in the R1514x series.

The operating temperature is -40°C to 105°C and the maximum input voltage is 36V, the R1514x series are very suitable for power source of car accessories.

The regulator output voltage is fixed in the R1514xxxxB and can be selected with a step of 0.1V in the range of 2.0V to 12.0V. Output voltage accuracy is $\pm 2\%$.

The packages for these ICs are the SOT-89-5 for space saving and the HSOP-6J for higher power applications.

FEATURES

Input Voltage	Max. 36V
Supply Current	
Standby Current	Typ. 0.1μA
• Temperature-Drift Coefficient of Output Voltage	Typ. ±100ppm/°C
Output Current	Min. 150mA (VIN=VOUT+3.0V; R1514x050B)
Line Regulation	Typ. 0.05%/V
Output Voltage Accuracy	±2%
Packages	SOT-89-5, HSOP-6J
Output Voltage Range	Stepwise setting with a step of 0.1V in the range of 2.0V
	to 12.0V is possible (refer to Selection Guide).
 Built-in Peak Current Limit Circuit 	
 Built-in Short Current Limit Circuit 	
 Built-in Thermal Shutdown Circuit 	
Operating Temperature	–40°C to 105°C

APPLICATIONS

- Power source for home appliances such as refrigerators, rice cookers, electoric water warmers, etc.
- Power source for car audio equipment, car navigation system, ETC system, etc.
- Power source for notebook PCs, digital TVs, cordless phones, and private LAN system, etc.
- Power source for office equipment machines such as copiers, printers, facsimiles, scanners, projectors, etc.

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum ratings are threshold limit values that must not be exceeded ever for an instant under any conditions. Moreover, such values for any two items must not be reached simultaneously. Operation above these absolute maximum ratings may cause degradation or permanent damage to the device. These are stress ratings only and do not necessarily imply functional operation below these limits.

^{*2)} For Power Dissipation, please refer to PACKAGE INFORMATION to be described.

TYPICAL APPLICATION

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

Phase Compensation of the R1514x Series has been made internally for stable operation even though the load current would vary. Therefore, without the capacitors, C1 and C2, the output voltage is regulated, however, for more stable operation, use capacitors as C1 and C2. Especially, if the input line is long and impedance is high, C1 is necessary. Moreover, if you use rather large C2, transient response will be improved. Recommended value is in the range from $0.1\mu\text{F}$ to $10\mu\text{F}$. Wiring should be made as short as possible.

Connect the capacitor, C1 between VDD pin and GND pin and C2 between VOUT and GND as close as possible.

GND wiring of mounting on board

No.2 pin and No.4 pin of SOT-89-5 package must be wired to the GND plane. No.2 pin, No.4 pin and No.5 pin of HSOP-6J package must be wired to the GND plane when it is mounted on board.

Thermal Shutdown

Thermal shutdown function is included in the R1514x Series, if the junction temperature is equal or more than +150°C(Typ.), the operation of regulator would stop. After that, when the junction temperature is equal or less than +125°C(Typ.), the operation of regulator would restart. Unless the cause of rising temperature would remove, the regulator repeats on and off, and output waveform would be like consecutive pulses.

Chip Enable Circuit

Do not make voltage level of chip enable pin keep floating level, or in between VCEH and VCEL. Otherwise, the output voltage would be unstable or indefinite, or unexpected current would flow internally.
